

Happy cats – with a **VALERIAN PILLOW TOY** from Aumüller!

Physical activity is good for cats. Playing, jumping and romping around – all these activities contribute to their health and well-being. Support the natural play instinct of your little velvet pawed friends with a valerian pillow toy for cats from Aumüller!

For our pillow toys we choose best natural ingredients, such as valerian root or catnip. As filling material we mostly use natural spelt from controlled production directly from the Swabian Alb. The intense fragrance of valerian attracts cats magically and encourages them to play!

Why do cats love valerian?

We humans sometimes find the particular smell of valerian root unpleasant. Cats, however, are magically attracted by it. This effect is mainly caused by the valerian acid. Also the included alkaloid actinidin which is also an ingredient of the catnip acts on cats as an attractant. It is similar to the pheromones which animals secrete during the mating season.

Which effect does valerian have on cats?

Valerian has the exactly opposite effect on cats as on human beings. While for human beings valerian is used as a tranquilizer, it has a permanently stimulating effect on cats. That's why many cats are really crazy about their valerian pillow, rubbing their heads or rolling on them.

What is the effect of spelt?

The unpeeled spelt grains not only provide rustling fun. Due to the unprocessed sharp edges of the grains, valerian granules are repeatedly rubbed off when playing with the pillow and the smell is renewed again. A unique combination making the fragrant experience of the product last longer in a natural way.

What needs to be paid attention to?

Although valerian does not cause dependency or withdrawal symptoms, we recommend not to permanently expose the cat to the fragrance.

To preserve the smell for longer, store the pillow in the resealable packaging bag or in an airtight and odour-proof box.

If the pillow is wet with the cat's saliva, it must be dried first.
